Assignment

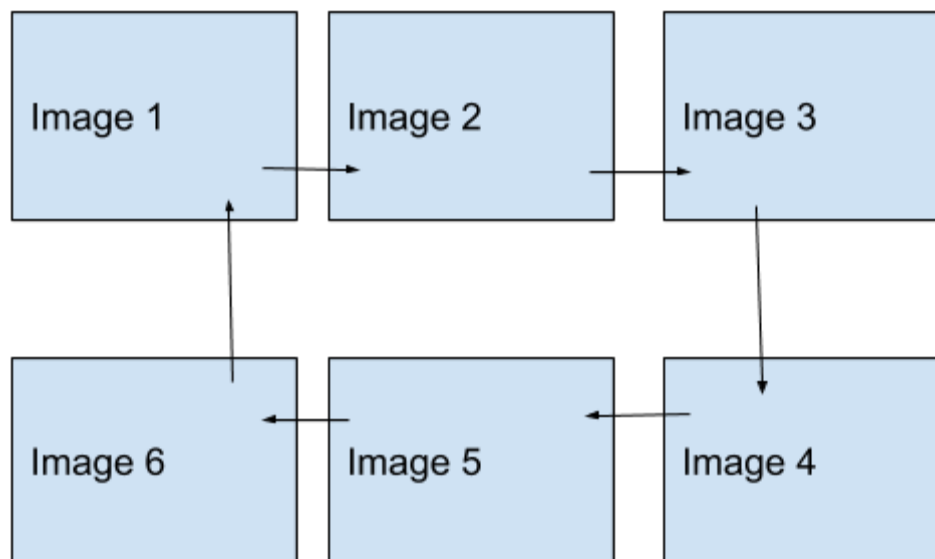

We are coding our an array of images and must use state machines. We will be adding shapes on top of our images and adding interactivity.

Audience

The audience is the professor and the other students.

Interaction Diagram (Interface Design)

When pressing keys 1-6, the image corresponding to that number will appear!

Functions are added and loops are used to create animations in the images.

Reflections

I am understanding the arrays now. However, I had a tough time adding mouse interactivity. I had fun using for loops and the random function to create interesting patterns for the backgrounds. I also think I am getting the hang of the state machines. :-)
